Hello Awase Syed

Hope you are doing great.....

Please let me know your interest along with your updated resume and details.

(It will be great help if you can refer someone for the same in case you are not currently available)

Role: Solution Architect – Risk & Audit

Location: Toronto, ON(Hybrid)

Duration - Long Term

Job Description:

Job Title: Solution Architect – Risk & Audit
Location: Toronto, ON
Experience: 10 Years +
Key Responsibilities:
The Senior Solution Architect Global Risk Audit Portfolio is responsible for end-to-end solution architecture across enterprise risk, financial risk, and Audit transformation initiatives.
This role ensures that risk, audit, and financial risk technology solutions are cohesive, scalable, and regulator-ready, while aligning with enterprise architecture standards.
The architect will enable automation, advanced analytics, and AI-driven capabilities across the Risk function, working closely with internal teams and strategic technology partners.

Architecture Ownership:
Own solution architecture for large-scale Risk and Audit initiatives, spanning risk intelligence, financial risk modernization, and integrated Audit programs.
Define current-state, transition, and target-state architectures aligned with enterprise technology strategy and approved delivery roadmaps.
Act as architecture design authority, ensuring consistency and interoperability across group functions and business domains.
Lead architecture for enterprise GRC and risk management platforms, ensuring they operate as authoritative systems of record.

Integration & Data Architecture:
Define clean integration patterns, data ownership models, and extensibility approaches to support evolving risk and Audit capabilities.
Architect solutions supporting financial risk transformation initiatives, including:
Centralized risk and financial data repositories
Integration with market data, stress testing, and analytics platforms
Alignment with enterprise data and analytics ecosystems

Ensure interoperability between financial risk platforms| GRC systems| and enterprise data environments.

AI & Advanced Analytics:

Define solution patterns for AI-enabled and advanced analytics use cases across Risk.

Ensure AI and analytics solutions meet governance| explainability| and regulatory expectations| and integrate seamlessly into end-to-end risk workflows.

Architecture Governance & Leadership:

Lead architecture governance activities| including design reviews| tradeoff analysis| and solution walkthroughs.

Partner with Program Managers| Product Owners| and delivery teams to translate architecture into executable roadmaps and phased implementations.

Ensure alignment with enterprise standards for security| data| privacy| and resiliency.

Act as a trusted architecture advisor to senior Risk| Technology| and Business stakeholders.

Communicate complex architectural concepts in clear| business-relevant language for executive forums| steering committees| and planning cycles.

Collaborate closely with internal architecture| data| security teams| and external strategic vendors.

Required Experience:

8 years of experience in solution architecture| ideally within regulated industries such as financial services| insurance| or risk-intensive environments.

Proven experience architecting large-scale| multi-program platforms across complex portfolios.

Strong hands-on architecture experience with GRC| risk management| or Audit platforms (commercial or custom).

Solid understanding of risk management domains| such as operational risk| financial risk| audit| compliance
